TECHNICAL SERVICES

Team

Our experts are ready to provide you with a complete solution.

NEFF delivers so much more than parts; we provide solutions. So when your business calls for custom designs, assembly and manufacturing services, machine performance enhancement, application software development, research and development, or even specialized engineering support such as electrical drawing packages, the NEFF team is ready to help. We can also create custom assemblies (with single part numbers for fast, easy ordering) that are kitted, tested, packed, and shipped to your exact specifications.

We are the automation experts.

The NEFF Technical Services Team is made up of experts dedicated to making your job easier. Electronics and pneumatics specialists, mechanical engineers, designers, and other product consultants devoted to finding you a solution that is simple, seamless, and efficient. They are experienced professionals who come from various industries and make it their business to thoroughly understand your business before suggesting technical solutions.

NEFF Technical Services and Solutions

We offer automation expertise, custom product packages, and value-add services to help minimize the time and effort you spend on design, fabrication, and assembly in the following primary areas:

End of Arm Tooling

Work with our team to create custom packages that include grippers, vacuum systems, cameras, I/O modules, pneumatic valves, and other robotic accessories that NEFF carries. Your packages can be mounted to a common adapter plate or several plates.

Electromechanical Systems

Give us your specifications and we'll build a control panel for our servo-driven ball screw/belt actuators, which can also be packaged with mechanical hardware to create an almost all-in-one unit. It comes to you assembled and ready to drop into your equipment, without having to assemble our product line kits.

Custom Manifolds

When you need a unique manifold solution – call on the NEFF team to deliver. We will work with your team to design, test, and assemble exactly what you need – portable manifolds to reach specific locations, package manifolds that combine valves of different series, manifolds to reduce tubing and hose messes or meet tight size requirements, and any other challenges you might face.

Electrical Panels

We can package electrical panels that incorporate various product lines we carry – like touchscreens, servo drives, etc. – to meet multiple challenges you face.

Custom Packaged Solutions

As a Premier 80/20 Distributor, we can help you find innovative ways to utilize 80/20 as machine bases, guarding, tables, workstations, carts, and other ways to house other NEFF product offerings such as valve manifolds, vision cameras, touchscreen enclosures, servo systems, robots, electric/pneumatic actuators, and more.

Design Services

We offer custom design kits and assemblies for pneumatics, electrical, and 80/20 products. If you require, we can provide proof of concept (POC) on certain applications.
